

Unistal Plans to Increase Global Channel Count

Mumbai, Mar 16, 2007 Unistal Systems provider of data recovery is planning to recruit more than 300 channel partners on global basis for its recently launched data recovery over Internet services.

Customers can bring their hard disk to any of the authorized Unistal channel partner for data recovery. The channel partner connects the hard disk to proprietary connectivity tools developed by Unistal (over a static IP). The experienced data recovery engineers based at the Unistal's Central Recovery Lab

(CRL) at New Delhi would then perform the repair process on the hard disk online.

Whenever required, channel partners can conduct a live chat with experts at CRL and resolve all technical issues instantly. Adding to it, customers can even track their data recovery process online.

"This unique service, enables us to expand our operations and offer cutting-edge data recovery services across the globe in a short period of time, said Alok Gupta, Director-Marketing, Unistal Systems.

Talking about the channel plans, he further added, We are looking forward to tie up with right channel partners and build an extensive network in all geographies.

Unistal's online recovery services are available for different types of hard disks and operating systems. Unistal has an expertise to perform data recovery from all versions and types of Windows, Linux, Macintosh, Novell, UNIX, RAID servers, mail servers, and database servers.
